

TO MEASURE LOT SIZE:

- 1) IF THERE IS SIDEWALK, MEASURE FROM THE INSIDE OF THE SIDEWALK
- 2) IF THERE IS NO SIDEWALK BUT HAVE CURB & GUTTER:
 - Measure street width from back of curb to back of curb
 - Divide that number in half as that will give you the center of the street.
 - Determine street right-of-way, divide that by 2 and measure back that footage from center of street: for example, if street right-of-way is 66', $\frac{1}{2}$ of that would be 33'. Measure 33' from center of street to property.
 - That is where to begin measuring your lot measurements

1) Lot Size 66 x 132

2 Lot Size 66 x 132
Street Right-of-way 66'
